ABSTRACT

Entries in the "Linguistic Bibliography for the Year 1967" (LB) were tabulated in order to determine the statistical characteristics of periodical coverage within each subject and language category in the LB's table of contents. The periodicals for which entries were tabulated included 998 journals and series, of which 632 are noted at least once as a source periodical among the entries tabulated in the study. Of the 226 categories on the LB's table of contents, 210 contained at least one periodical or serial entry in the study. Tables contain the following information: frequency of entries and periodicals by major categories; periodicals by total frequency of entries; journals contributing more than two citations in each major category; journals nominated by linguists for coverage by a current awareness service; and distribution of citations by major categories for journals nominated by linguists for coverage. (Author/AM)

Table IV.A. Journals Nominated by Linguists for Coverage by a Current Awareness Service 22
Table IV.B. Distribution of Citations by Major Categories for Journals Nominated by Linguists for Coverage 23-26

1. Procedure

Entries in the Linguistic Bibliography for the Year 1967[1] (abbreviated here as LB*) were tabulated in order to determine the statistical characteristics of periodical coverage within each subject and language category in the LB's table of contents.[2] The periodicals for which entries were tabulated included 998 journals and series (47 series, in Roman type), of which 632 are noted at least once as a source periodical among the entries tabulated in the study. Of the 226 categories on the LB's table of contents, 210 contained at least one periodical or serial entry in the study.

For summary purposes, tabulations are presented according to categories derived from the table of contents categories as follows:

1. Each major group of the table of contents is assigned a letter (A.-S.), and tabulations are presented for each of these groups regardless of the number of entries.
2. Within groups A. (General Works) and B. (General Linguistics and Related Branches of Study) any minor category with at least 35 entries is shown separately; two additional groupings of related topics were made in B.; remaining smaller categories are combined and shown as "Other" on the tables.
3. For groups D. (Indo-European Languages, Roman numerals I-XIII) and I. (Languages of Eurasia and Northern Asia, Roman numerals I-VI) each major subdivision is shown regardless of size. Within these subdivisions any category representing a language or having at least 35 entries is shown separately; all smaller categories and the larger non-language categories are combined and shown as "Other" within the major subdivisions.
4. Within other major groups any language category with at least 35 entries is shown and all other categories are combined as "Other" on the tables.

2. Explanation of Tables

Table I, "Frequency of Entries and Periodicals by Major Categories", shows number and percentage of the 5,464 entries as they are distributed over the various categories. 58% of all entries are in group D. (Indo-European Languages). Individual languages with the most entries are Russian, with 5.5%, and English, with 4.3%. The number of periodicals and percentage of the 632 cited in the overall study are given for each category and in total;

* All abreviations used in this study are those used in the Linguistic Bibliography.

totals are a separate tabulation (not additive), which eliminates duplications among the subdivisions.

The summary of Table II, Part A, shows individual and cumulative totals for periodicals and entries in order of frequency of citation. Part B lists all periodical codes (occasionally, names) from LB (pp. XV-XLII) by frequency. Part A provides the information that approximately 85% of all citations in the study can be retrieved from the 46.5% of the periodicals which have a frequency of 6 or more (note Figures 1 and 2, which summarize the data). The names of these are available in Part B.

Journals with more than two citations in a category tend to contribute well over half of all citations in the language categories. Table III shows the number of such journals and the percentage of citations they contribute to each major category. Also shown is the name of the journal with the highest number of citations and the percentage it contributes to the category, which ranges from a low of 5.9% (Ancient Latin) to 62.5% (Basque).

Table IV describes the LB subject coverage for 35 journals recommended by linguists in an earlier LINCS study[3] for coverage by a current awareness service. As shown in Part A, three of these journals, with ranks of 10, 17, and 35 in the nominations, are not included on the LB's periodical list, hence have no data in this study. Four others, with ranks of 13, 15, 20, and 26, have zero entries. However, the remaining 28 journals represent 582, or 10.65%, of citations in this study. Coverage by category, shown in Part B of Table IV, differs substantially from the total study, with considerably more emphasis on B. (General Linguistics):

Category	% of Entries 28 Journals	% of Entries Total Study
A. General Works	4.0	8.1
B. General Linguistics	34.7	14.8
D. Indo-European Languages		
XII.B.IV. English	12.5	4.3
XII. Total Germanic	17.7	12.7
XIII.C.IV.b. Russian	2.9	5.5
D. Total	37.3	58.2

Only three of the ten most cited journals, in terms of LB, are included on the "recommended" list. The other seven all are published in Eastern Europe and tend to be highly specific to one language category, as can be seen on Table III.

Rank by Frequency	Country of Publication	Name
1	Bulgaria	BE - Bŭlgarski Ezik
2	USSR	VJa - Voprosy Jazykoznanija
3	Netherlands	Linguistics
4	Czechoslovakia	SS - Slovo a Slovesnost
5	Finland	Vir - Virittäjä
6	Czechoslovakia	SR - Slovenska Reč
7	Rumania	LbR - Limba Română
8	USSR	IzvAN - Izvestija Akademii Nauk SSSR
9	United States	Lg - Language
10	Yugoslavia	ZAnt - Živa Antika

FIGURE 1.

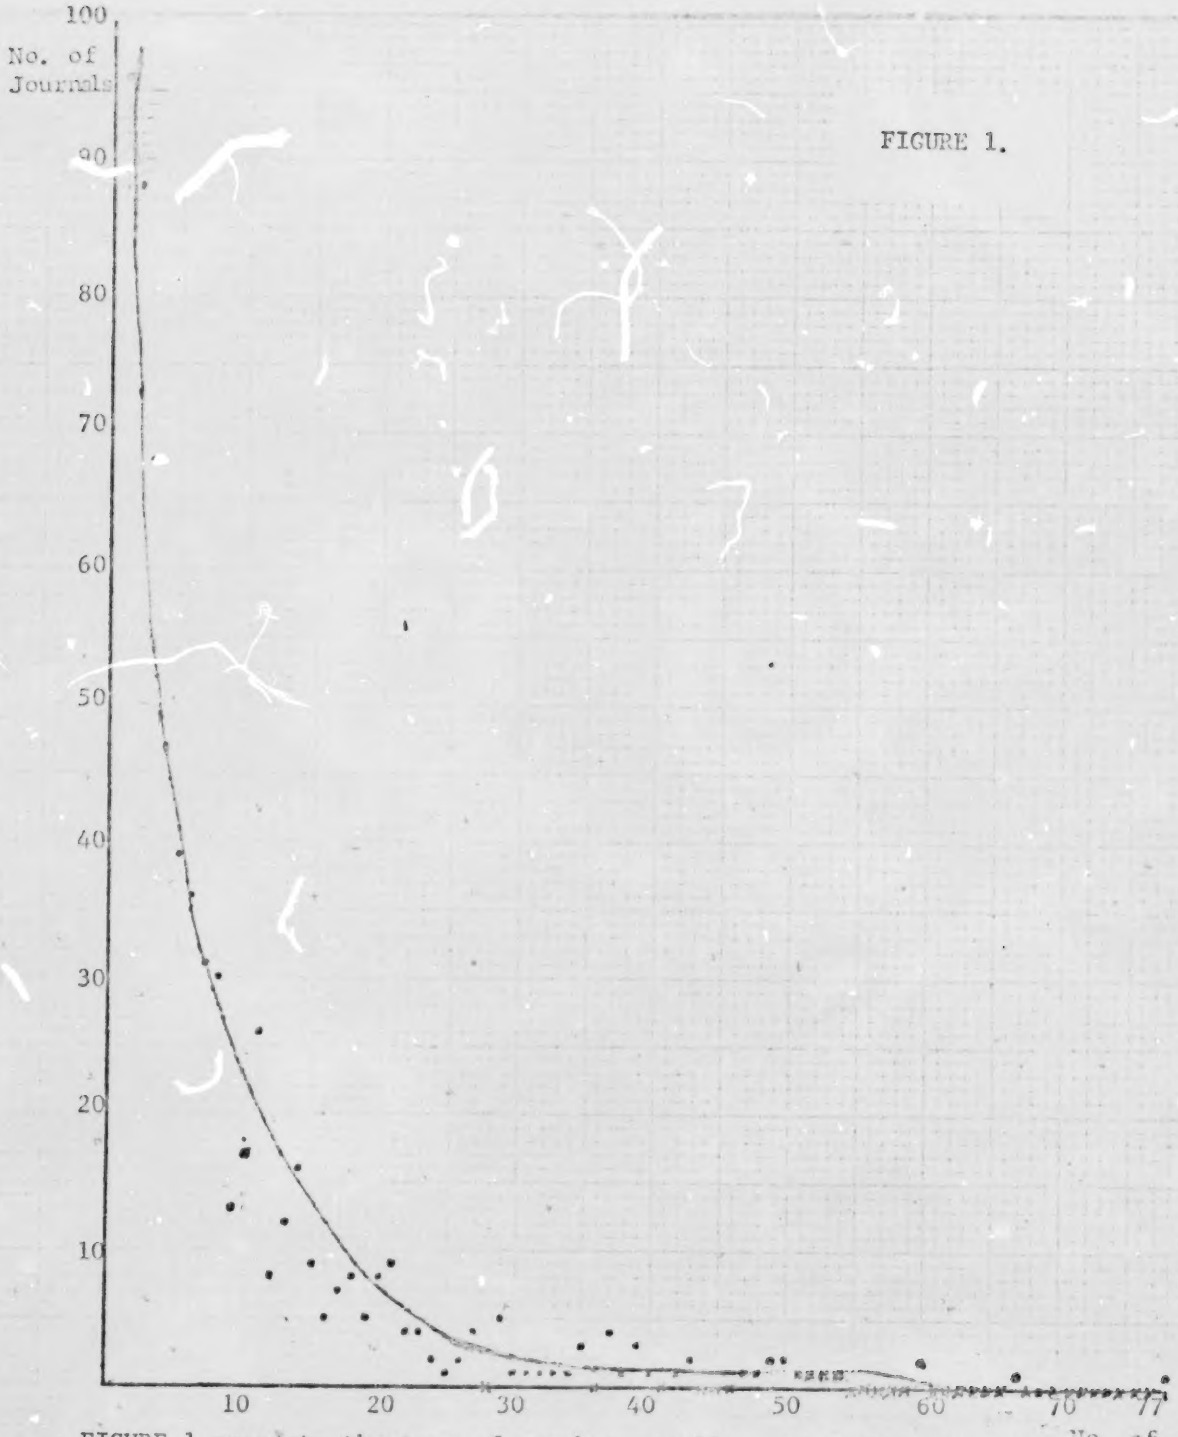

FIGURE 1 presents the type of graph typically used to illustrate Bradford's or Lotka's law. The data is taken from Table II.A, and the figure indicates the number of source journals having each number of entries in the LB. The first point is read as indicating that there were 96 journals contributing only one entry apiece to the LB. This type of distribution is normally fitted by either a log or log normal distribution.

FIGURE 2.

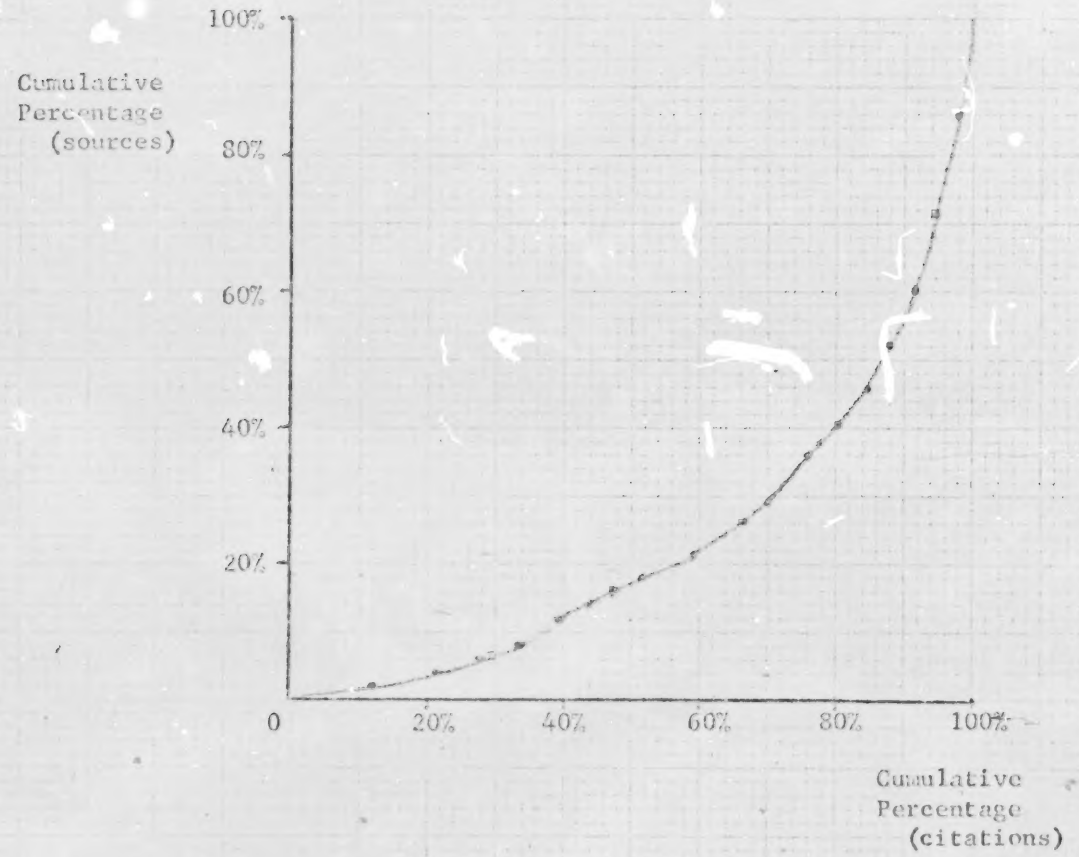

FIGURE 2 relates the cumulative percentage of citations that appear in the Linguistic Bibliography to the cumulative percentage of periodical sources (see Table II. A). It is a 90 degree arc, and it is possible to read from it the percentage of journals which would have to be covered to get a corresponding percentage of citations. Thus, you would have to cover only 40% of the total list of journals in order to obtain 80% of all citations.
